

Business Problem

Key Business Problems identified:

Problem 1 — Top-of-funnel leak 68.9% of visitors leave without adding anything to cart (page view to cart: 31.1% only). Poor product discovery, unclear pricing, lack of social proof, or slow page load may be responsible. This is the single biggest revenue leak.

Problem 2 — High cart abandonment (46.8%) 727 users added to cart but never purchased. May be due to unexpected shipping/tax costs, or payment friction. Every recovered cart = ₹106 average revenue.

Problem 3 — Social traffic is underperforming Social brings 21.6% of events but only 12.9% of revenue (₹11,331). Users from social have the lowest purchase volume (102 orders vs 343 from organic). Either traffic quality is poor, or landing pages don't match social ad creatives.

Problem 4 — Zero repeat purchasers Every single user purchased at most once. No returning customers detected in this 35-day window. No loyalty loop, no retention mechanism, no upsell sequence in place.

Problem 5 — Email channel is underleveraged Email has the lowest event volume (1,443 = 15.4%) but achieves a strong AOV of ₹101 and 177 conversions. Scaling email volume is relatively low-cost and likely the highest-ROI acquisition lever available.
